Highlights

This factsheet provides data on EU imports of organic agri-food products in 2025 and highlights key developments compared to 2024. Data on import volumes of organic products come from the Commission's online management tool TRACES (TRAdE Control and Expert System). The import data are summarised in terms of origin and destination, as well as in terms of product classes and categories.

Volumes of imported organic products up by 12.8% in 2025, reaching a new record

- Total imports of organic agri-food products in the EU increased from 2.64 million t in 2024 to 2.98 million t in 2025 (+12.8%). This marks the highest volume of organic imports since the start of the collection of such data in 2018.
- Organic imports increased over most product categories, including fruits and vegetables as well as their preparations, arable crops and plant-based products, as well as coffee and mixed food preparations. On the other hand, a decrease was recorded in imports of organic meat, dairy and fish products.

Arable crop products account for most of the increase in volume of organic imports in 2025

- The EU is a major importer of organic fruit, vegetables and olive oil. In the total organic imports in 2025, this class of products accounted for 45.5% share of the volume.
- Imports of organic fruit, vegetables and olive oil in terms of volume increased by 8.8% to 1.35 million t in 2025, mainly due to higher imports of nuts (mainly from China and Türkiye), potatoes (from Egypt) and bananas (from Ecuador), while imports of organic olive oil decreased.
- Imports of arable crops and plant based products, which had a share of 39.3% in total organic import volume, increased by 15.5% to 1.17 million t. Growth was recorded in all product categories of this class, most notably in oilseeds and protein crops (+20.5%, incl. +39.4% for soy cakes), cereals (+13.9%, incl. +37.1% for wheat), cereal preparations (+10.8%), sugar (+5.7%), oilseed and palm oils (+2.8%) and other vegetable oils and fats (+19.2%).
- Imports of higher value organic products also increased. Coffee, tea, cocoa and spices increased by 25.5% to 287 thousand t, thanks to higher coffee and cocoa bean imports. Organic wine, beverages and food preparation imports grew by 13.0% to 77 thousand t, mainly due to a 18.2% increase in imports of mixed food preparations and ingredients, though wine imports decreased by 8.4%.
- Imports of organic *animal products* were relatively stable at 25 thousand t (-1.6%). Imports of *fish* and *non-agricultural* organic products decreased to 12.7 thousand t (-22.9%), while imports of non-edible products (mainly thanks to pet food) increased by 20.5% to 53 thousand t.

Organic sugar becomes second most imported product subcategory

- With 34 thousand t out of 212 thousand t being organic, olive oil remains the most organic agri-food product subcategory imported into the EU in 2025, with a share of 16.0%. Almost all imported organic olive oil (99%) is of extra virgin quality and is imported from Tunisia.
- White sugar becomes second most organic imported product subcategory, with organic share increasing from 10.7% in 2024 to 14.7% in 2025.
- Among the other subcategories with a significant organic share in imports in 2025 were spices (e.g. ginger) (14.6%), bananas (14.0%), aromatic plants for technical use (11.4%), apples and pears preparations (11.0%), and most of them saw these shares increase compared to 2024.

Netherlands remains the EU's top destination; Poland enters Top 10 for the first time

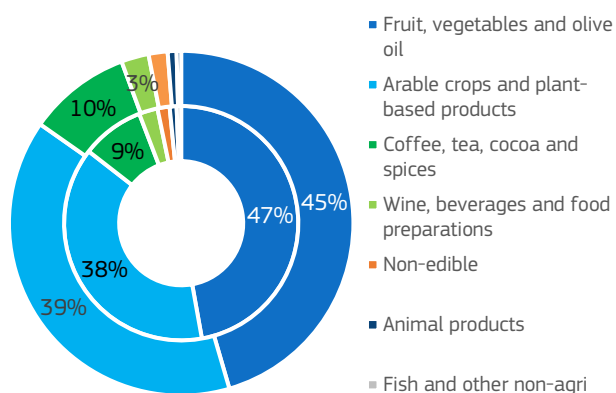

- The Netherlands remained the top destination of organic imports into the EU with a share of 36% and saw a significant increase in total volumes (+14%). Germany (+11%) remained 2nd while Italy became the 3rd destination with a strong increase in imports (+26%), while Belgium dropped to 4th place (-2%). In France (5th) and Denmark (6th) organic imports increased strongly, by 22% and 44% respectively.
- Among other main EU importers, Sweden and especially Austria reduced organic imports once again (respectively, by -2% and by -22%), while Spain and Ireland both saw increases of 16%.
- From the Member States that joined the EU as of 2004, Poland reached Top 10 among EU destinations for the first time (+6%), while Bulgaria organic imports almost quadrupled (+ 271%), propelling the country to the 12th place.

Ecuador leads, China records highest gains and the United Kingdom slips out of Top 10 origins

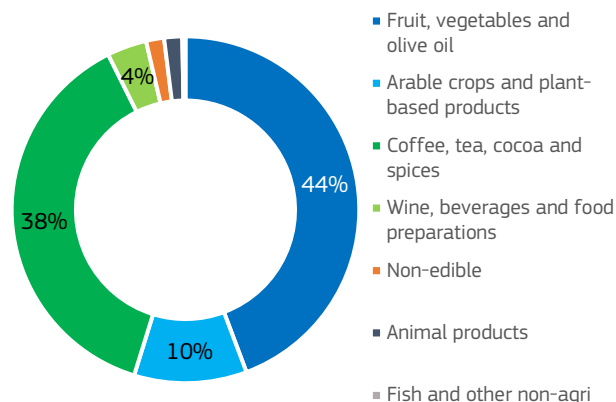

- Ecuador continues to reign at the top of the exporters of organic products to the EU (+10% compared to 2024), with a further increase in volumes of exports of organic bananas (+11%). Imports of organic bananas from other main origins remained relatively stable.
- Imports of soya cake from China increased by 35%, helping the country record the highest gains (+32%) and remain the 2nd most important country of origin. Imports from Peru (3rd place) also increased (+16%), mainly due to higher imports of coffee, tropical fruit and lemons, while Dominican Republic rose to 4th place (+5%) thanks to an increase in cocoa bean imports.
- Imports from Togo grew fastest among the other top suppliers (+47%), thanks soya seeds and soya cake. Imports from Colombia also increased (+10%) while from India they were stable. On the other hand, a decline in imports was noted for Ukraine (-14%) and Türkiye (-4%), while the United Kingdom (+8%) was replaced in the Top 10 origins by Pakistan (+19%).
